## AMENDMENTS TO THE SPECIFICATION

Please replace the abstract at page 30 of the present application with the following paragraph: "The invention includes a treatment an apparatus for treating fibrous cellulosic raw material suitable for use in a paper making plant.[[,]] The apparatus extracts comprising extracting means for extracting contrary material from the raw material, crushing means for crushing crushes the raw material to remove nodes therefrom and splitting means for splitting splits the crushed raw material lengthways. A co-rotating twin screw conveyor is used to pulp the crushed material, the conveyor being divided up into comprising a plurality of temperature and/or pressure controlled zones, wherein treatment materials may be inserted means for inserting treatment materials into at [[a]] least one zone and means for controlling the temperature and/or pressure of all of the zones. The black liquor effluent produced in the pulping process is treated in an apparatus comprising an evaporator for concentrating the liquor to 30-70% solids, a processing vessel for treating the concentrated liquor at a temperature of between 300-600C, and a closed conveyor for transporting the concentrated liquor from the evaporator to the processing vessel at a temperature in excess of 90C. The invention also includes the method involved in methods for using the above apparatus."
